

Please include this form with your old cover.

Bow

Width Measure
Inside-Inside of
frame; **BEFORE**
the radius. Do
not bend tape.

Length Measure
Inside-Inside right
down the middle,
and over the
console area to
include crown

Width Measure
Inside-Inside of
frame; **BEFORE**
the radius. Do
not bend tape.

YES
Inside - inside

NO
outside

Stern

Spreader Lights ?
mark them

NOTE:

All measurements should be taken
inside-inside of FRAME, not old canvas.

Side-side measurements:

Just reach up and measure inside-
inside of frame; both front and back as
shown green arrows. **Keep tape**
straight. Do not bend.

Length measurement:

Should be taken with tape resting **over**
topside of console area to include
crowning, yet still inside-inside of
frame, right down the middle.

If canvas is still on the frame, please
mark with Sharpie (**from underside**)
EVERYTHING welded to the hoop;
support bars, rocket launchers,
spreader lights, tubing, etc. **REASON;**
to avoid for grommet placement,
especially if they are outside of frame
because they could offset lacing.
(anything that touches the frame, even
outside grab bar weld points).

Marks only need to be 2-3" long.

Rocket Launchers ? mark them

We do ONE THING, and we do it better than anyone else

There are many different types of T-Top frames. Which type most resembles yours? Please write the letter of yours on previous page.

A

B

C

D

E

F

Here's what you do:

1. Make a few marks on the underside of your canvas 2"-3" long where all obstructions are.
2. Take off your old cover to measure the FRAME.
3. Measure your frame inside-inside as shown on diagram, then write them on the 1st page drawing after you print it.
4. Mail your old top to us along with 1st page of this form.
5. Include a **check** or **money order** payable to **A-Team Marine** or:
PayPal payment to Dave@ateammarine.com or:

BEFORE REMOVING YOUR OLD T-TOP COVER

We do not like duplicating mistakes, therefore we are asking you to place some marks on the underside of canvas before removing it and supplying 3 simple measurements

- **Marking**

From the underside of your old T-Top Cover, take a Sharpie, or grease pencil, and make a 2” – 3” mark on each side of your support bars. Also, mark additional areas such as **rocket launchers**, spreader lights, outside grab rails, in fact, **Mark everything that is welded to the hoop**. These are areas we do not want to put a grommet because it will offset your lacing, whether they be on the **inside or the outside of your framework**. Sometimes we will put the grommets back in the same place, but other times we see evidence where they should have been placed differently.

We cannot see what is on the outside, so that is why we ask you to mark those areas.

- **Measuring**

We must measure **INSIDE to INSIDE** of the **FRAMEWORK** because that is the size of the canvas once it is made up. Outside measurements are no good to us.

When measuring width / side-side, just reach up and measure inside-inside before the corner at both front and back without bending your tape.

When measuring length, measurement should be taken with tape resting **over topside console area** to include crowning, yet still inside-inside of frame, right down the middle.

We take pride in our work and we pay attention to detail, where others don't always. If we are going to make you a new T-Top Cover, let's do it right and not duplicate any mistakes. We see them come into the shop in all ways, shapes, and forms, and try our best to give you the best fit we can. We know it's scary to order anything custom over the Internet and expect 100% satisfaction, and that is why we go the extra mile.

Thanks for trusting our abilities. We appreciate it and will do a good job for you !!
